The editorial of this issue of the International Journal of Keratoconus and Ectatic Corneal Diseases (IJKECD) is dedicated to cover the sixth Keratoconus Expert Meeting which is organized yearly by Dr Jerome C Vryghem from Belgium, as a parallel meeting to the European Society of Cataract and Refractive Surgeons (ESCRS). This expert meeting gathers tens of keratoconus experts from all over the world.

The meeting deals with the new technologies used for the diagnosis and treatment of keratoconus focusing on issues which are controversial and tries to come out with some conclusions relying on an internationally acknowledged team of keratoconus experts.

The poster (p. 159) of the last meeting which was held in London in September 2014. A team from our journal documented the meeting, an additional team wrote the presentations, presented them to the speakers and had their confirmation on what will be published in this editorial.

This editorial is a part of the strategy of our journal to be the stage of all opinions regarding the management of keratoconus.

Lastly, I would like to thank all the experts who presented their works at this meeting, all the experts who were present and contributed to the discussions after the presentations and to Dr Jerome C Vryghem for choosing the lectures presented at the meeting.

At the end of the presentations, the audience voted regarding controversial issues in the diagnosis and management of keratoconus, the questions and the voting results appear at the end of this editorial.
